III. Discussion on Class Diagram	5
IV. Some GUI	6

I. Summary of the Project

The system to be developed will be a web application allowing clients to schedule deliveries. An emphasis on design and analysis based on the project's requirements will help build a system better suited to efficiently handle client requests. The code will be based on documentation such as domain model, class diagram, interaction diagrams, use cases, etc. The main functions provided by the web application to its users will be the following: request a delivery, get a proposal of a quotation, receive communication about the service, track the order, pay for the order, and review the service. All services will be developed in an intuitional way in order to heighten the customer experience.

II. Class Diagram

III. Discussion on Class Diagram

Delivery Responsibilities:

- Acts as the Information Expert for *Item*, computing the total delivery cost by summing item prices.
- Functions as a Creator for *Item* and *Review*, reflecting their whole-part relationship by managing their instantiation within the *Delivery* scope.

Polymorphism Implementation:

- *UserDTO* and *Client* classes embody polymorphism principles. Both *Individual* and *Company* extend from *Client*, differing in attributes like *CompanyName*. Additionally, the inheritance hierarchy includes *Client* and *Staff*, both extending from *UserDTO* and differing in attributes such as *deliveryIDs* and *jobTitle*. The interfaces were primarily employed to customize content for distinct user types.

Protected Variance:

- All the interfaces that we have related to a user reflect protected variance. *UserDTO* is the wrapper interface, while *Individual*, *Company* and *Staff* are all protected variations of said wrapper.

Controller Classes (*DeliveryService* and *ReviewService*):

- Serve as intermediaries between the GUI and domain, orchestrating all database-modifying interactions.
- Ensure focused operations on specific entities, such as the *DeliveryService* for the delivery entity. This approach fosters high cohesion within classes and can be seen as an instance of pure fabrication due to its purposeful design and segregation of concerns.

The domain model is created during the initial stages of a project for a specific purpose. It represents key concepts, entities, and the relationships among these entities. Importantly, the domain model maintains simplicity by avoiding the introduction of implementation logic. This intentional simplicity facilitates the domain model's role as a communication tool between developers and project stakeholders. On the contrary, the design class diagram is crafted in later stages and encompasses all essential logic, including attributes, methods, and class associations. Primarily intended for developers, the design class diagram provides a comprehensive view of the software structure. In our specific case, we have illustrated relationships such as whole-part relationships, incorporated attributes and methods into each class, and introduced supplementary classes like service classes for design purposes.

Based on the sequence diagram interactions, we have taken the different parts of the diagram that interact with each other and translated those interactions into a class diagram. By doing so, we also made sure to identify the essential methods and attributes needed for the communication represented in the sequence diagrams and added them to our class diagram. It is important to note that the class diagram not only maps those interactions, but also illustrates how different components of our app relate to each other, including their relationships, associations, dependencies, and multiplicity. This way, the class diagram displays all the necessary items and connections needed to be able to build the system and operations depicted in the sequence diagrams.

IV. Some GUI

The graphical user interface can be generated through the code located in our GitHub Repository: [Hexagon-DeliverySystem](#). The design and look for all the pages have been completed. Below are screenshots of our web application from various sections.

Registration Page

A screenshot of a web browser displaying a registration page. The browser's address bar shows 'localhost:4200/register'. The page has a dark header with 'Hexagon' on the left and 'Home' on the right. The main content area is a white card titled 'CREATE AN ACCOUNT'. It contains six input fields: 'First Name*', 'Last Name*', 'Email*', 'Confirm Email*', 'Password*', and 'Confirm Password*'. The password fields have eye icons for toggling visibility. Below the fields is a 'Register' button. At the bottom of the page, a footer reads '© 2020 Copyright: MDBootstrap.com'.

A second screenshot of the same registration page, but with additional elements. The 'Last Name*' field is now the first input field. Below the 'Confirm Password*' field, there is a dropdown menu labeled 'Choose type of us...'. Below the dropdown is a blue 'Register' button. At the bottom of the form, there is a link: 'Have already an account? [Login here](#)'. The footer remains '© 2020 Copyright: MDBootstrap.com'.

Landing Page

Request for Delivery & Quotation Page

A client can request a quotation or request a delivery by filling out all the required fields from this page and clicking on "Finish". Upon clicking the "Finish" button, the client has the option to proceed to payment or save the quotation.

The screenshot shows the "Request Delivery or Quotation" page. The browser address bar indicates the URL is localhost:4200/request-delivery-quotation. The page has a dark header with the Hexagon logo and navigation links: Home, Deliveries & Quotations, Reviews, Customer Service, and Log Out. The main heading is "Request Delivery or Quotation!", followed by the instruction "Please fill out the information below to get a quotation or request a delivery". Below this is a form titled "Delivery Details" with two sections: "Enter departure location information:" and "Enter destination information:". Each section contains three input fields: "Depart Address*", "Depart City*", and "Depart Province*" for the first section; and "Destination Address*", "Destination City*", and "Destination Province*" for the second section. The footer contains the copyright notice "© 2020 Copyright: MDBootstrap.com".
